Monocoque Construction, Rhino-Tough™ Hull and Guide Tested Program

Lund achieved another industry first in making a hull with outstanding sturdiness and durability without increasing weight.

Lund did this through use of a Monocoque type structural design. This gives exceptional strength with less weight by making the body and framework of the boat all one unit. Instead of using needless extra weight for structural support, Lund uses heavier aluminum in the hull.

The result: (1) structural rigidity that far surpasses common skin and frame hulls; (2) Rhino-Tough™ hull that is nearly impervious to all types of hull damage through normal use; (3) reduced weight; (4) quieter ride.

This design has more than ever made Lund Boats a favorite of guides, resort owners and fishermen who demand rugged safe boats.

In fact, Lund is the only boat manufacturer to use a panel of Northwoods guides to test all their boat models. The guides use the boats as their own which includes running through rough waters of huge Northwoods lakes, trailer ing mile after mile on country roads, dragging over rough portages and ramming up on rocky beaches.

Obviously these boats aren’t pampered; and when the boats meet the heavy demands of Lund’s guides, you can be sure your Lund will meet your approval. Lund’s guides are critically honest about their equipment; they like Lund Boats. So will you!

FULL TEN YEAR GUARANTEE

Lund, with 21 years of experience in building aluminum boats, offers the finest guarantee you could ask for. This guarantee covers:

WORKMANSHIP: Lund’s construction experts have an average of over 8 years of experience in boat building. We guarantee their workmanship.

MATERIALS: Lund aluminum is purchased from America’s leading manufacturers... and milled to Lund specifications. We guarantee it with full confidence that you will never have a problem!

Guarantee valid only on boats purchased through authorized Lund dealers.
