Lund puts more into it. You get more out of it.

Uncompromising quality and innovative features. That's the very special combination that makes Lund boats stand out distinctly from others.

No matter how you measure it — design integrity, top grade materials, careful assembly, thorough testing — Lund goes the extra step to put the most quality into each boat it produces. To help you get the most enjoyment, satisfaction and value from your boating investment.

That's why real fishing enthusiasts prefer Lund. And that's why fishing pros including guides, outdoor writers, fishing tackle industry leaders and television angling experts stake their reputations on Lund.

It's very likely that no other boat line in America has a better "following" among hard-core fishermen than Lund. It is, in a nutshell, the standard by which other aluminum boats are judged.

Lund calls upon professional fishing guides to pre-test new models before they are brought to the boating marketplace. This Guide-Tested feature assures you of getting a boat that will give you complete fishing satisfaction.

And all Lund boats are certified by the BIA (Boating Industry Associations) to meet or exceed its rigid safety standards and comply with horsepower/load capacities.

For 1984, Lund offers a variety of outstanding fishing boats including the new Tyee 18 GL, specifically designed for Great Lakes off-shore gamefishing. It also offers a selection of family runabouts that combine outstanding performance for fishing, skiing and cruising versatility with exceptional value.

Lund for 1984. Welcome aboard!

LUND FISHING ALMANAC

For a meal that's hard to beat try this "Walleye Parmesan" recipe with your next catch of walleye.

For 6 to 8 walleye fillets: Mix 1 tsp. garlic powder or salt in 2 cups vegetable oil. Cut fish into pieces and marinate in oil for 2-4 hours in refrigerator. Drain fish and place on baking sheet. Butter fish approx. ¼ lb. and cover with 1 cup parmesan cheese. Bake at 350° for 30-45 min. until cheese browns.

LUND FISHING ALMANAC

Many pro fishermen will tell you that boat control accounts for a big percentage of their success. One of their preferred methods is backtrolling. By trolling in reverse the fisherman can follow bottom contours, keeping the bait in the fish zone at all times. This method also allows for better presentation of the bait and keeps lines out of the prop.

A flasher sonar unit should always be set to show a strong "0" and bottom signal regardless of the signal width. The change in width should be determined by the change in existing conditions (levels of surface clutter, hard or soft bottoms, etc.) and not by operator adjustment.

□ Interior, oatmeal □ Vinyl, nightwine
□ Carpet, red/black

When trolling for Salmon and Trout on the Great Lakes and more than one fish is caught on a certain lure at a certain depth, change all of the rest of the lines to match the size and color of the lure that is producing the fish. Run them at the same depth and your success ratio should increase substantially.

For passive northern pike, try trolling a large sucker minnow eight to ten inches in length parallel to weed lines using a 17' to 21' cast pole with heavy dacron line, a mono-covered steel leader and substantial weight to keep the bait near the bottom. Each parallel pass down the weedline should be made at progressively deeper depths or until fish contact is made.

A Word About Lund Dealers...
We're proud of our Lund dealers. Not just because they represent us in your community, but because a Lund dealer is a true marine professional. A Lund dealer knows boats and motors and trailers and accessories. He knows how to match a rig to your own unique boating lifestyle. He knows the boating waters 'round his territory... where the fish are biting, where the best water skiing waters are, which launching ramps are most convenient.

A Lund dealer knows how important good service is to you. That's why he has trained mechanics, qualified in the latest in service techniques. He's our man in your town. That means he's one of the best.

...And About BIA Certification
BOATING INDUSTRY ASSOCIATIONS, CERTIFIED means a boat not only meets minimum Coast Guard safety requirements, but exceeds those standards as well. In most cases, it means BIA Certified boats meet the more rigid safety standards established by the American Boat & Yacht Council.

Weight and horsepower capacities, flotation, fuel and electrical systems, ventilation and bilge pumps, steering systems — a BIA Certified boat meets or exceeds tough industry standards in these important areas. That means more reliability and peace of mind for the boater. Not every boat is BIA Certified. But every 1984 Lund boat is certified by the Boating Industry Associations as meeting or exceeding uncompromising marine industry standards. We don't compromise our boats, because you don't want to compromise your boating.

Lund's Limited Warranty
Lund warrants each new fiberglass hull for a period of two (2) years and each new aluminum hull for a period of ten (10) years from date of purchase, by the original purchaser (based on years of use, under normal recommended operating conditions) as described in the warranty folder. A copy of the Lund Limited Warranty is attached to each new Lund boat, or may be obtained from any Lund dealer or from the Lund factory.

Some photos of Lund boats in this catalog show factory and/or dealer-installed options. Because Lund American is dedicated to constant product improvement, equipment specifications, available options, color selections and model availability are subject to change without notice.

Boat weights are with standard equipment only.
